

SPECTRA

Build Notes

Version 1.0.2
Build Date: 27/03/2018

Fixes/Changes

Release 1.0.2

This build includes the following fixes/changes:

1. Fixed a defect where the Filter Designer would crash after editing the first point under special circumstances.
2. Fixed a defect introduced in 1.0.1 where the Analyser would crash when Analysing a Drawn waveform under special circumstances.
3. Fixed a rounding error in the Shape, Waveform and Filter Designer which was causing the synth to crash when there were 6 or 7 handles.

Release 1.0.1

This build includes the following fixes/changes:

1. Fixed a defect where the LFO's were not re-triggering correctly when the LFO mode is MONO and the key mode is either MONO or LEGATO.
2. Fixed a defect where the analyser triggers were not being calculated correctly impacting the ability to analyse from multiple triggers.
3. Fixed a defect in the displaying of Spectral/Filter Sequence times where times less than a second were incorrectly described as milliseconds.

Reporting Defects

Should you experience an issue you believe is a defect while using Spectra or if you would like to recommend changes to this manual we encourage you to notify us via the following address.
